

Pallets with hidden contamination can damage your products, your reputation and your hard earned bottom line.

REMCON Poly Pallets help preserve your product integrity. This is especially true in the food and pharmaceutical industries where eliminating contamination throughout the entire supply chain is critical.

Wooden pallets deteriorate with every use and can introduce splinters, loose boards, nails and chemical preservatives into your facility creating unwanted safety and quality issues. Why would you run that risk?

Injection molded plastic pallets, while better than wood, are often designed in an open grating style creating dark crevices and voids where dirt and stray material love to hide from even the most intense cleaning procedures.

REMCON Poly Pallets deserve your consideration because:

- Durable double wall construction resists cracks and dents providing a longer life cycle and cost savings.

- Easy-to-clean, non-porous FDA-compliant virgin polyethylene resists dirt and contamination build up.
- REMCON Poly Pallets are 100% satisfaction guaranteed for one full year.

Maintaining clean pallets has never been easier with REMCON's smooth, flat deck surfaces. Soap and water along with your best cleaning practices will help keep your products safe and your reputation spotless.
